NEW REPUBLIC

So now what?

Google 2005

Code gets added.

Tools get slower.

Builds take longer.

Tests take forever.

Code goes untested.

Dependency cruft builds.

Large, infrequent changes frequently conflict.

Builds break overnight.

Emergency pushes common.

Fear is the mind killer.

Enormous early success

Inertia

Overconfidence, arrogance,
[Impostor Syndrome](#)

Insecurity

Inexperience,
“My code is too hard to test”

Ignorance

Old tools,
“I don’t have time to test.”

Friction

Impact of testing is impossible to
measure a priori

(After-the-fact: goto fail; and Heartbleed)

Priority Structure

If it can't be measured,

(e.g. more clicks)

it doesn't matter.

(i.e. won't get me promoted)

Ignorance/Communication Breakdown

How does culture change?

Not like this...

Or like this...

Beware of heroes, echo
chambers

Cultivate mythology as a
useful model

What did we have to work with?

Employee directory, project
database, wiki/Sites

Transparency

Freedom to experiment,
20% time

Autonomy

Grouplet system,
startup ethos

Collaboration

Crossing the Chasm

GWS tech lead Bharat Mediratta believed
automated testing would help...
...and it did.

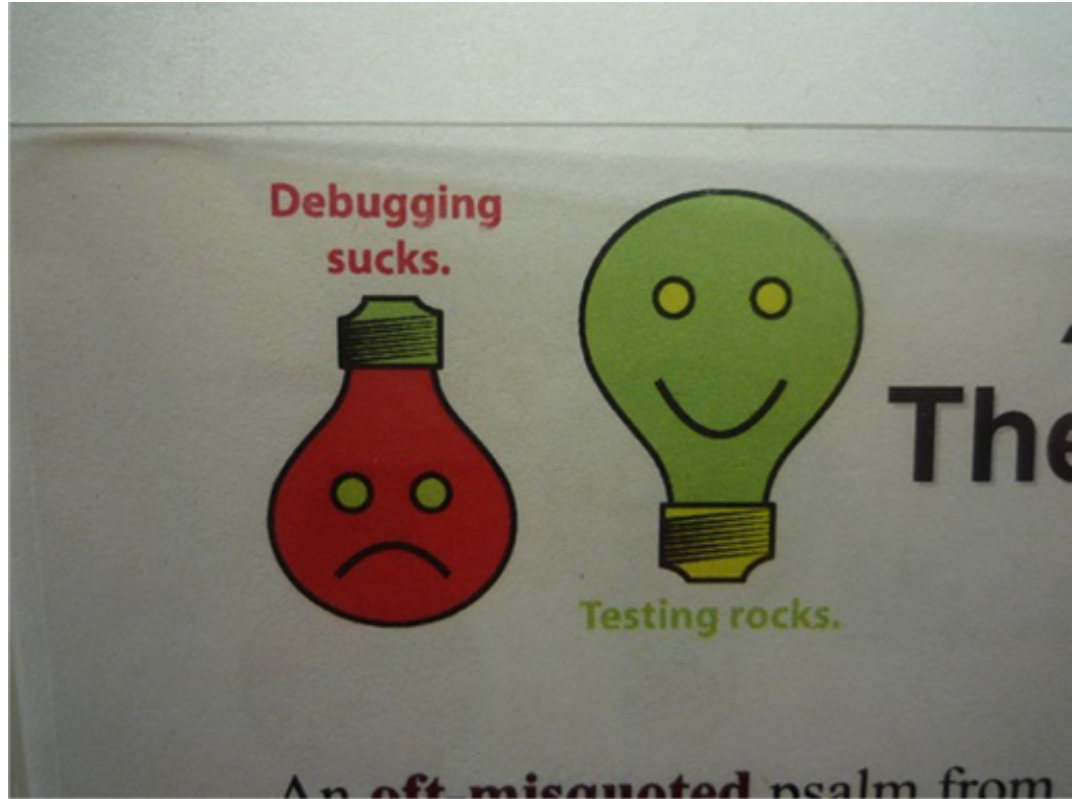

Testing Grouplet

Started by

and Nick Lesiecki

Volunteers pooling
20% time

to drive adoption of
automated testing

Testing on the Toilet (TotT)

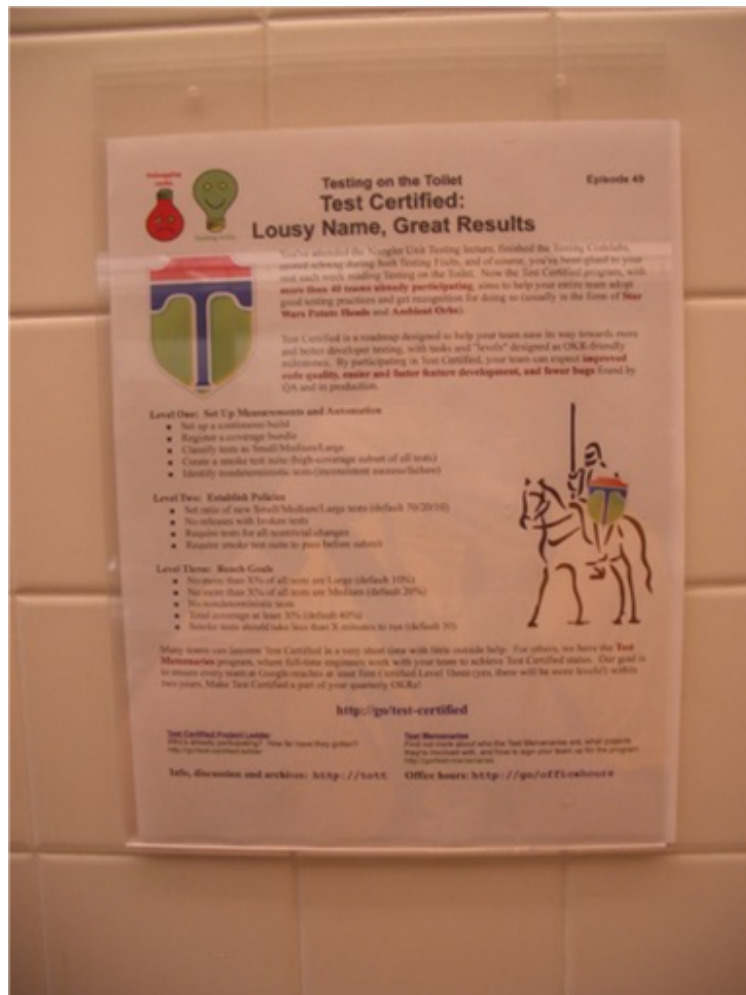

Ubiquitous,
incremental exposure

Test Certified (TC)

Clear, tangible path via
measurement, policy, goals

Test Mercenaries

Hands-on help, tool
adoption and advocacy

Fixits

Company-wide events,
usually one day long

Address “important but
not urgent” backlog

Focus, motivation,
concrete goals, free stuff

Testing on the Toilet Engineering Fixit: Developer Testing

Episode 31

The Testing Grouplet will sponsor an engineering-wide Testing Fixit on **Thursday, March 8, 2007**.

<http://go/testing-fixit>

This site suggests a variety of ways in which individual contributors, tech leads and whole teams can help make the Fixit a success (and get T-shirts too). As you ponder how you can participate, consider these suggestions:

Fix broken and nondeterministic (flaky) tests

Tests should help us detect and isolate problems quickly and accurately. If your tests are nondeterministic, interesting failures are drowned out by “expected” failures. Tests that are left broken perpetuate a sense that it’s OK for tests to fail. So invest some Fixit time to better your test suites by fixing the code causing the test to fail, fixing the broken test code itself, or replacing bad tests altogether. Redesign your interface to make testing easier and eliminate flakiness; see “redesign hard-to-test code” in the “Team Tasks” section of go/testing-fixit.

Use coverage results to add tests

Code coverage can show you the difference between what you think is tested and what is actually tested. Start by re-reading about coverage data misuse in Episode #23 (toll). Then, email unittest-live@google to set up a coverage bundle for your project or follow the instructions in the FAQ at go/coverage to collect the data yourself.

Migrate BUILD targets to Small/Medium/Large

Move existing `xx_unittest` and `xx_regtest` targets to the new-style `xx_test` targets using the Small/Medium/Large classification. The reasoning behind this classification—and why you should care—is explained here: (wiki/Main/GoogleTestDefinitions).

The `ratetests` tool (wiki/Nonconf/RateTests) can analyze your test’s resource usage and suggest a classification.

Fix tests that break in 64-bit mode

Building in 64-bit mode rather than 32-bit mode gives you more computing power since a significant portion of our machines are 64-bit capable. But many unit tests fail in 64-bit mode. You can check how your test is doing on the Code Dashboard (unified); navigate to the test history page and select “64-bit” from the configuration pop-up menu. Help with the migration effort by ensuring that all tests pass on 64-bit platforms.

Learn more from the wiki (wiki/Main/SixtyFour).

Do a Codelab

Whether a Noogler or a long-time employee, you might be surprised by what our current batch of Codelabs has to offer. In particular, “Dependency Injection” and “Testing Code That’s Hard to Test” present advanced design topics that go a long way towards addressing “my code is too hard to test” problems.

Read all about it on wiki/Codelab.

Contribute to Testing on the Toilet

We’re always looking for new authors and editorial feedback. Visit wiki/Main/TestingOnTheToilet and/or join the testing-on-the-toilet@google mailing list. Produce a new episode or help improve those in development.

Tools for creating beautiful online experiences for the American people

Built and maintained by U.S. Digital Service and 18F designers and developers, this resource follows industry-standard web accessibility guidelines and reuses the best practices of existing style libraries and modern web design. It provides a guide for creating beautiful and easy-to-use online experiences for the American people.

Priority Structure

limiting perceived risk

meeting regulatory requirements

job security

Internalization: Don't rock the boat

No quality incentives, [PCSRA](#),
[“successful company” people](#)

Inertia

Avoid risk/“accountability”,
“gov’t can’t attract talent”

Insecurity

Waterfall is familiar,
testing is someone else’s job

Ignorance

Outdated tools/procedures,
vendor lock-in of code, data

Friction

Policy often mandated by nontechnical people
Development teams disconnected from end users
They don't know what they don't know

Open Source

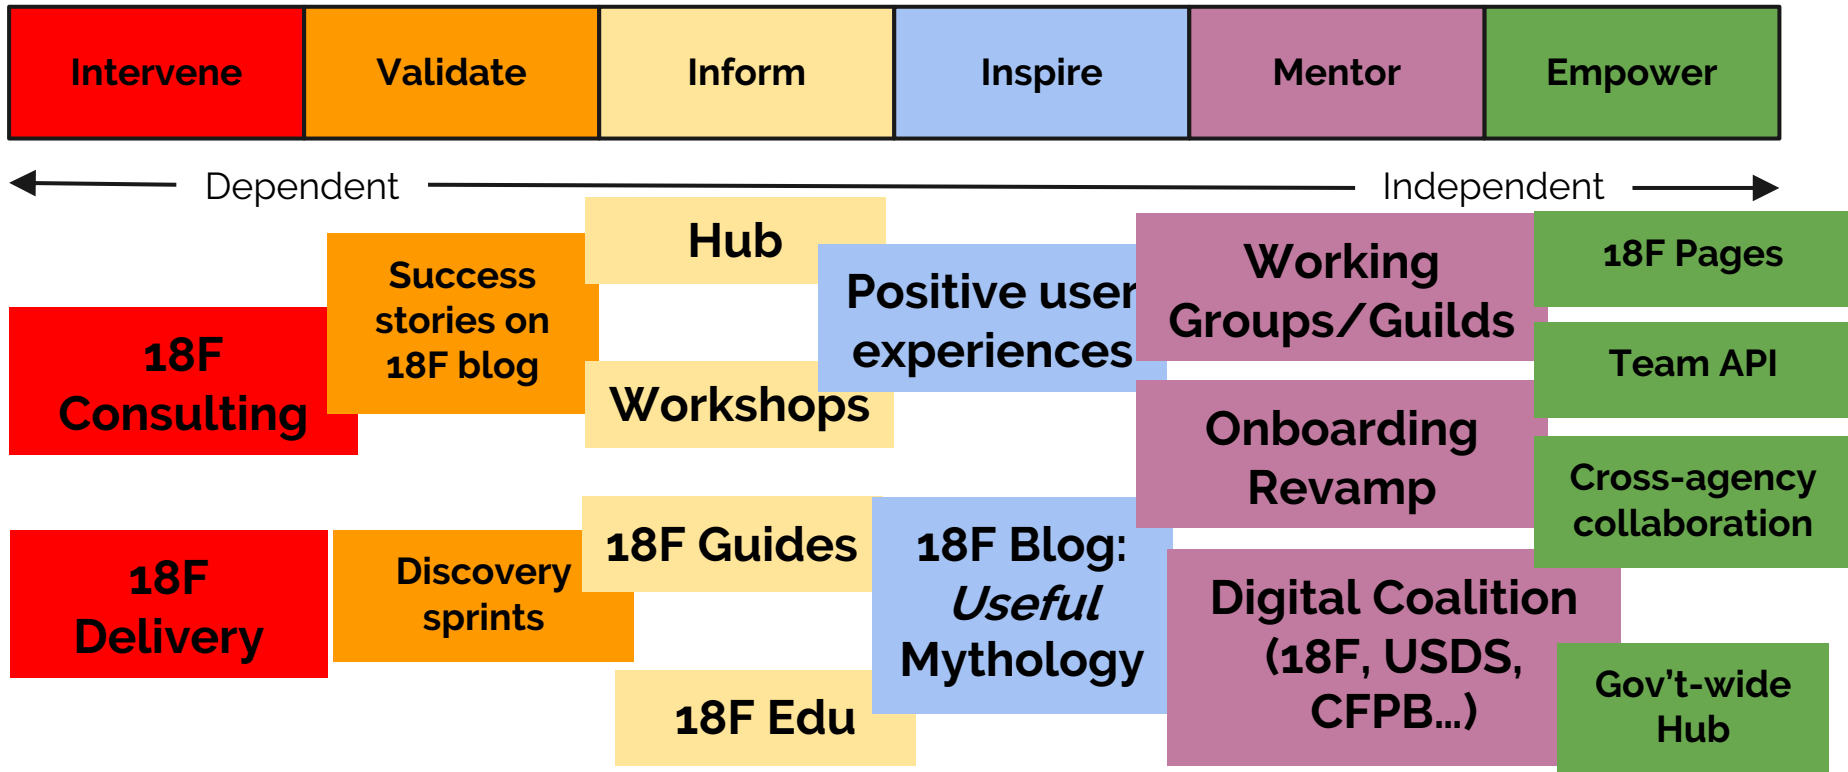

18F Guides

18F Guides is the repository for best practices across our teams. Our guides are open source, and you're free to use them as you wish. Our hope is that other digital service teams — both inside and outside the government — will adopt or modify the practices outlined here.

By developing this material in the open, we hope to encourage expert review and contributions from members of the tech community, furthering our goal of improving how government works through increased civic engagement of tech specialists.

To create a new 18F Guide, or to update an existing guide to the 18F Guide format, see the [18F Guides template](#).
